

We are committed to maintaining a safe and clean operation and have taken the following measures to virtually eliminate the possibility of spread of the COVID-19 virus.

* The aircraft **interior is cleaned** with an aviation approved disinfecting cleaner Calla 1452 RTU **after each occupied leg.**

* **Passengers** are asked to declare that they are **not sick nor have any symptoms**, and have not been recently exposed to contamination risk.

* **Passengers** are required to **wear PPE** : face masks (we'll be happy to provide face masks if passengers do not bring their own), gloves at passengers discretion.

* **Hand sanitizer** is provided, and disinfectant wipes, and passengers are required to follow guidance from CDC to frequently clean their hands.

* **Social distancing**: no passenger is admitted in the front co-pilot seat, and we are **restricting the number of passengers to 3 only in the rear.**

* The pilot **front cabin is totally isolated from the rear passenger cabin** with a clear 1/16" acrylic sheet. Ventilation and heat are fed from outside air exclusively and enter from separate vents to the two parts of the cabin, with **no recirculated air.**

* **Passengers** have as always their **own door for entry at the rear** of the aircraft, while pilot enters from the front right door.

These measures are taking advantage of our Seneca aircraft configuration, and we hope that restricting travel to 3 passengers will not impact our clients needs too much.

We can also reconfigure the passenger cabin with two seats only to leave plenty of room for a big dog to stretch on the platform!
